

Akshat Jain

AI Native Software Engineer | Ghatkopar, Mumbai 400075, India | akshatbjain.aj@gmail.com | +91 9425919685 | LinkedIn

PROFESSIONAL SUMMARY

Software Engineer with 4+ years of experience building scalable full-stack, analytics, and AI-driven systems. Strong ownership across frontend, backend, databases, system design, performance optimization, and production delivery. Experienced with React, Next.js, TypeScript, Python, FastAPI, PostgreSQL, MongoDB, Redis, and event-driven architectures. Currently working as an AI Native Software Engineer, using Claude Code, MCPs, agents, and multimodal/multi-model workflows to accelerate planning, implementation, validation, and testing while retaining engineering ownership.

PROFESSIONAL EXPERIENCE

AI Native Software Engineer, Billeasy, Mumbai

Jul 2026 – Present

- **Built and scaled multi-tenant transit ticketing PWAs** serving Mumbai Metro, Hyderabad Metro, Nagpur Metro, Pune Metro, Noida Metro, Maharashtra Maritime Board, MSRTC, Purple Buses, and Neeta Buses, supporting **25M+ PWA hits** and approximately **150K daily ticketing transactions** across Metro and Bus tenants.
- **Owned end-to-end frontend, backend, and database development for Maharashtra Maritime Board**, implementing digital ferry ticket booking, QR-ticket generation, payment flows, tenant-specific configurations, and commuter-facing PWA experiences.
- **Developed and enhanced the Bus transit operator dashboard**, building operational workflows and backend/data integrations across ticketing, passes, routes, catalog, dispatch, and operator management while supporting a multi-tenant production architecture.
- **Adopted an AI-native engineering workflow** using Claude Code, MCPs, specialized skills and agents, and multimodal/multi-model systems for architecture planning, code generation, codebase exploration, implementation, validation, and testing, while retaining ownership of system design and production decisions.

Software Engineer, Infinite Analytics, Mumbai

Aug 2023 – Jul 2026

- Led development of a scalable **BI platform (Power BI-like)** for multi-platform campaign monitoring, enabling better visualization and **40% faster performance analysis** through data-driven dashboards.
- Architected a flexible chart-creation framework using **Plotly, ApexCharts, and Deck.gl**, plus a resizable Bento-style analytics dashboard enabling custom insights with zero engineering involvement.
- Designed a **SQL query builder** supporting geospatial and marketing datasets; implemented Redis caching and RabbitMQ queueing, reducing dashboard load times by **35%** and improving request reliability.
- Implemented geospatial analytics with **Kepler.gl / Deck.gl, Trino, Redis caching, data compression, and SSE streaming**, improving report performance **20x (5 minutes to 15 seconds)**.
- Designed and implemented a **multi-agent AI system** converting natural language into dashboards, reports, charts, and executable SQL using **LangGraph, LangChain, ChromaDB, FastAPI, and Gemini APIs**.
- Built a campaign performance optimization dashboard and developed a segment-level spend recommendation engine using **Random Forest, MinMaxScaler, and TensorFlow/Keras RNN models**.

Founder & Full-Stack Developer, Finemate, Indore

May 2022 – Jul 2023

- Designed, built, and deployed a full-stack **learning platform** focused on long-term memory through spaced repetition, social learning, and gamified engagement.
- Developed a **React frontend and Flask backend**, implementing flashcards, social interactions, messaging, graphical to-do lists, community features, and SSO with Google, Meta, and LinkedIn.
- Built a custom content-creation platform using **H5P and WYSIWYG tools** for infotainment posts and question-based learning modules.
- Implemented scalable backend services using **MongoDB, MongoEngine, REST APIs, and AWS**, while owning UX/UI, product strategy, and cognitive-science-driven feature design.

Software Engineering Intern, SI Online, Ratlam

Jan 2022 – Apr 2022

- Developed and maintained MERN-stack applications, contributing to **IRCTC Agent Registration, AEPS, and Video Tutorials** modules.
- Built backend APIs for fast, reliable querying of analytical data for IRCTC agents, improving data accessibility and operational efficiency.
- Collaborated on feature enhancements and module optimization, maintaining secure, scalable, and high-performance backend workflows.

TECHNICAL PROFICIENCIES

Languages: JavaScript, TypeScript, Python

Frontend: React.js, Next.js, Redux, Redux-thunk, TanStack, Bootstrap, Tailwind, Material UI, Radix, Plotly.js, ApexCharts.js, Chart.js, D3, Kepler, React Hook Form, Streamlit, HTML5, CSS3

Backend: Node.js, Express.js, Nest.js, Flask, FastAPI, Django, MongoEngine, PyMongo, SQLAlchemy, Fastify, Drizzle

Databases: MySQL, PostgreSQL, MongoDB, ChromaDB, Firebase, Redis, RabbitMQ, Elasticsearch, Cassandra

Cloud / Infrastructure: Docker, AWS, IAM, Lambda, VPC, EC2, S3, Route53, Nginx, GitHub Actions

Data / Analytics: Pandas, NumPy, Matplotlib, Splunk, Superset, Trino

AI / LLM: MCP, AI Agents, RAG, CAG, LangChain, LangGraph, LlamaIndex, Gemini APIs, Claude Code

Other: Selenium, Beautiful Soup, Figma, GitHub, Bitbucket, WordPress, WebSocket, WebRTC, Auth0, DataDog, N8N

Learning: Pinecone, Neo4j, Airflow, React Native

EDUCATION

Shri Vaishnav Institute of Science and Technology, Indore

Bachelor of Information Technology | Jul 2018 – Jun 2022

Patidar Higher Secondary School, Dhar — 12th

St. George Higher Secondary School, Dhar — 10th

PROFESSIONAL TRAINING

Artificial Intelligence & Machine Learning using Python, Ardent Computech

SELECTED PROJECTS

Khuli Kitab — RAG Knowledge Base

- Built a RAG application that converts local documents and Google Drive folders into a searchable knowledge base using **FastAPI**, **LangChain**, **ChromaDB**, **Gemini**, **MongoDB Atlas**, **Next.js**, and **Shadcn UI**.
- Implemented content-hash-based deduplication, persistent chat history, session-aware rate limiting, semantic retrieval, and Gemini-powered response generation.

Monitoring, Analytics & Recommendation Dashboard — Sherlock AI

- Built a full-stack campaign analytics platform using **Python**, **FastAPI**, **SQLAlchemy**, **MySQL**, **React**, **Tailwind**, **Shadcn**, **Redis**, **RabbitMQ**, **Plotly**, **ApexCharts**, **D3**, and **New Relic**.
- Implemented modular charting, SQL-based exploration, caching, asynchronous processing, and geospatial analytics for multi-platform campaign performance analysis.
